PROFESSIONAL SUMMARY

Software Engineer with 7+ years of experience building backend systems, enterprise applications, APIs, and data-base-driven software. Strongest experience is in C#/.NET, SQL Server, enterprise workflows, integrations, and legacy application modernization. Experienced across the full software lifecycle, from requirements analysis and solution design through development, testing, deployment, and maintenance. Additional experience includes AngularJS, Next.js, Elasticsearch, Azure DevOps, desktop applications, OCR workflows, and PostgreSQL.

SKILLS

Backend & APIs

C#, .NET Framework, .NET Core, ASP.NET Core, ASP.NET Web Forms, REST APIs, LINQ, Entity Framework, Dependency Injection

Architecture & Engineering

Object-Oriented Programming, Enterprise Application Architecture, Layered Architecture, Clean Architecture Concepts, Design Patterns, API Design, Database Modeling, Workflow-Based Systems, Legacy System Modernization

Databases & Data

SQL Server, Oracle, PostgreSQL, MariaDB, Elasticsearch, ADO.NET, Database-Driven Applications

Frontend & Applications

AngularJS, JavaScript, TypeScript, Next.js, HTML, CSS, WPF, Windows Forms, Unity

DevOps & Development Tools

Azure DevOps, Azure CI/CD Pipelines, Git, Pull Requests and Code Reviews, Agile Development, Visual Studio, Postman, Docker

EXPERIENCE

Software Engineer

Personal Projects — Stuttgart, Germany

Jan 2025 - Present

- Built software projects spanning backend services, APIs, databases, and modern web applications using .NET, PostgreSQL, Next.js, and Supabase.
- Designed application architectures and business workflows with emphasis on maintainability, clear separation of concerns, and reliable data handling.
- Developed projects from concept through implementation, integrating frontend applications with backend services and persistent data stores.

Software Engineer

Isolucion — Bogota, Colombia

Oct 2024 - Oct 2025

- Developed enterprise regulatory compliance applications using C#, ASP.NET Web Forms, AngularJS, SQL Server, and Oracle across business-critical modules.
- Designed and implemented the SST 2.0 inspection module covering inspection workflows, scheduling, APIs, DTOs, database models, and frontend integration.
- Supported modernization of a legacy enterprise platform by introducing Entity Framework and Dependency Injection into new development work.
- Extended enterprise search capabilities by integrating PPE delivery and inspection entities into Elasticsearch indexes.

Software Engineer

Skalling — Santiago de Chile, Chile

Aug 2024 - Oct 2024

- Contributed to architecture and technology planning for a lead management platform using TypeScript, Next.js, and Supabase.
- Implemented lead lifecycle workflows covering registration, ownership assignment, consultant transfers, sales progression, and withdrawal.
- Developed dashboards presenting lead statistics to support operational monitoring and business decision-making.

Software Engineer

Isolucion — Bogota, Colombia

May 2021 - May 2022

- Developed enterprise software using C#, .NET Framework, SQL Server, Oracle, JavaScript, and database-driven application architectures.
- Improved Elasticsearch search functionality by diagnosing indexing, result rendering, database retrieval, and LINQ query issues.
- Led Agile ceremonies when the team lead was unavailable, communicating progress and technical topics to team leaders.
- Collaborated with CEO and innovation stakeholders to clarify requirements and define technical solutions.

Software Engineer

Thomas MTI — Bogota, Colombia

Feb 2018 - May 2021

- Developed WPF and Windows Forms applications supporting operational workflows, data entry, document management, and database-driven processes.
- Designed an OCR-based document digitization workflow supporting processing of more than 1,000 physical lottery tickets per day.
- Implemented workflow architecture covering reception, inventory, digitization, validation, auditing, and final storage.
- Worked directly with clients and product owners to translate operational requirements into technical solutions.

Software Engineer

Wekantu Studios — Bogota, Colombia

Oct 2015 - Dec 2017

- Developed educational applications for web, iOS, and Android using Unity, C#, CreateJS, JavaScript, and MariaDB.
- Delivered videogames, e-books, and Moodle LMS solutions for institutional and private-sector clients.
- Managed software delivery from planning and development through testing, deployment, and maintenance.
- Collaborated with educators, designers, musicians, clients, and internal stakeholders to translate requirements into software products.

PROJECTS

Music Trainer

Next.js | C# | PostgreSQL | Railway

- Built a music training application combining a modern web frontend with backend functionality and persistent PostgreSQL data.
- Developed the project from concept through implementation as an independent software project.

SST 2.0 Modernization and Compliance Platform

C# | ASP.NET Web Forms | .NET Core | AngularJS | SQL Server | Oracle | Elasticsearch

- Implemented inspection workflows, scheduling, APIs, DTOs, database models, and frontend integrations for an enterprise compliance platform.
- Supported modernization by introducing Entity Framework and Dependency Injection while integrating with existing enterprise application components.

EDUCATION

Bachelor's Degree in Computer Science

Universidad de Cundinamarca

February 2009 - September 2015

LANGUAGES

English

Professional Working Proficiency (IELTS C1)

Spanish

Native

German

Basic (Learning)
